Project PrEPY (PrEP Pilipinas)	amfAR	Demonstration Project	Philippines	MSM, Transgender women	Project PrEPY is a 12-month pilot study with 12-month opt-in roll-over post project program that evaluates feasibility and accessibility of community-based preventive HIV pre-exposure prophylaxis (PrEP) services. Moreover, the study aims to develop, implement, evaluate, and document the delivery and evaluation of such services which can ultimately serve as guide in the scale-up of PrEP services for men who have sex with men (MSM) and transgender women (TGW) in the Philippines. In the course of the study, eligibility and uptake of PrEP among MSM/TGW, as well as the adherence and behavioral impact were assessed while determining breakthrough HIV infection, antiretroviral drug resistance, and prevalence and incidence of curable sexually transmitted infections.	Completed	Completed; still providing PrEP.
