

# What is PrEP?

PrEP stands for “pre-exposure prophylaxis.” PrEP is a small pill that helps HIV negative people stay HIV negative. PrEP can be taken at any time of day, with food or without food.

**How does PrEP work?**

If you take PrEP daily, the presence of the medication in your blood and tissues can stop the virus from establishing itself in your body.

**Does PrEP really work?**

Taking PrEP as directed lowers your risk of HIV by more than 90%.

**How long does PrEP take to work?**

It takes about 7 days for anal sex and 21 days for receptive vaginal sex for PrEP to achieve protection levels.

Learn if PrEP is right for you, speak to a health care professional at your nearest health care facility or visit our Facebook page.
