

## Getting LEN Rollout Right: Resources and Tools

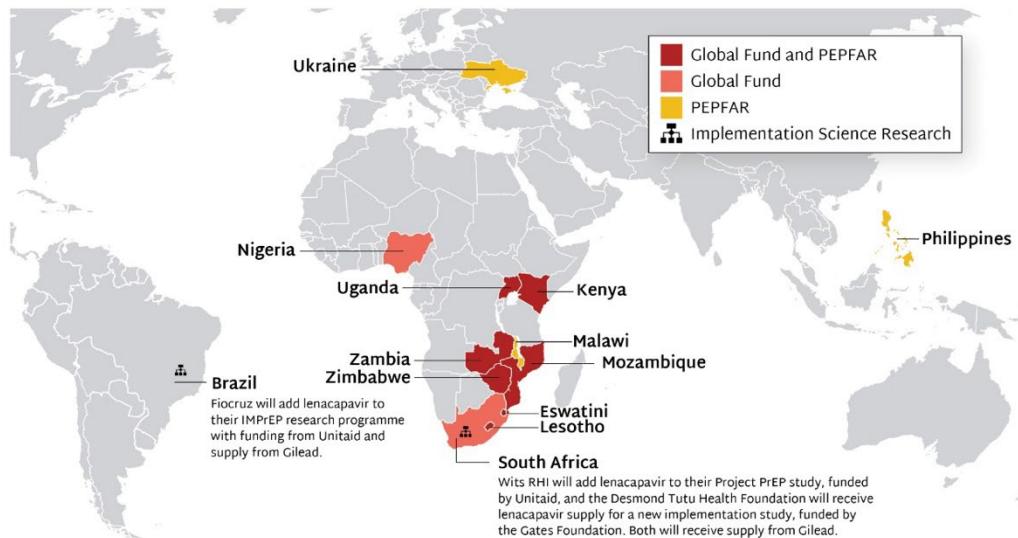

Latest Update: 12 November 2025

Lenacapavir for PrEP (LEN), a six monthly injectable, was found highly effective at preventing HIV in two large clinical trials in 2024 and has since become the latest PrEP product to enter the market, following initial approval by the US Food and Drug Administration in June 2025 and recommendation by WHO. (See here for a full list of current approvals and submissions.) In September 2025, the Gates Foundation and Unitaid announced partnerships with generic manufacturers (Hetero Labs and Dr Reddy's Laboratories, respectively) to achieve a price of \$40 USD/person/year for generic injectable LEN, due to become available in 2027 in the countries under Gilead's license territory (including 120 lower and middle income countries).

In July 2025, the Global Fund announced support to nine countries for early LEN adoption. In September PEPFAR confirmed support for seven of those countries and an additional three countries, bringing the total number of early adopter countries supported to 12. Both funders have jointly committed to reaching up to two million users with LEN over three years, starting in these countries. Unitaid, in coordination with CIFF, WHO, and implementing partners, is also actively supporting LEN introduction, including through implementation science programmes in Brazil and South Africa and through a Unitaid call for proposals launched in July 2025. Overall, these countries anticipate receiving LEN in early 2026, or even earlier in some cases- a much faster timeline than has been seen with previous PrEP products.

### Source of Lenacapavir for PrEP Supply to Early Adopter Countries

PEPFAR and Global Fund are supporting 12 countries with early access to programmatic supply of LEN, expected to arrive by Q1 2026; Unitaid and the Gates Foundation are supporting 3 implementation science projects, with supplies from Gilead Sciences.

The resources below, alongside insights drawn from the report [Getting PrEP Rollout Right This Time](#), can support countries in the early stages of LEN planning. These tools, and many others, are all publicly available on [PrEP Watch's Fundamentals of PrEP Planning pages](#) and are being disseminated as part of a coordinated effort between AVAC, CHAI, CIFF, the Global Fund, PEPFAR, PSI, Unitaid, Wits RHI, and WHO under the [Coalition to Accelerate Access to Long-Acting PrEP](#) to streamline efforts on tool development. Further tools will be posted as they become available. Newly-added tools are indicated with a red star. 

Category	Tool	How can this support LEN rollout?
Normative Guidance	<a href="#">WHO guidelines on LEN for PrEP</a>	WHO guidelines provide a basis for development of national guidelines.
Normative Guidance	<a href="#">Standard Operating Procedure (SOP) for LEN for PrEP</a>	This adaptable SOP supports the development and adoption of national SOPs that align with WHO LEN guidelines.
Normative Guidance	<a href="#">Template for technical working group (TWG) terms of reference</a>	This template can aid in setting up a TWG to develop national LEN guidelines.
Normative Guidance	<a href="#">Evidence from the PURPOSE trials shared at IAS 2025</a>	Evidence around use of LEN by adolescents and pregnant and lactating populations, as well as around certain drug interactions, can be incorporated into local clinical guidelines.
Planning/ Monitoring and Evaluation	<a href="#">PrEP-it</a>	This web-based tool can help set PrEP (including LEN) targets, estimate costs and impact associated with targets, identify priority areas for PrEP for adolescent girls and young women, and forecast needed commodities.
Provider Training	<a href="#">WHO and Jhpiego Provider Training Toolkit on Use of Oral and Long-Acting HIV PrEP</a>	This toolkit can be used to train clinicians to provide multiple PrEP methods, including LEN.
Provider Training	<a href="#">Lenacapavir Provider Tools and Job Aids</a>	These editable tools can be used to support providers to deliver LEN for PrEP, and include client fact sheets, counselling job aids, and charts to support initiation, injection, and switching.
Site Assessment	<a href="#">PrEP Site Implementation and New Product Readiness Assessment Tool</a>	This assessment tool can be used to evaluate and improve existing PrEP services at a facility and to prepare for the optimal delivery of new PrEP products, such as LEN for PrEP.
Site Assessment	<a href="#">Site readiness assessment template</a>	This adaptable template can be used to determine which sites are ready to begin delivering LEN for PrEP.
Site Assessment	Facility-level checklist and SOP template- <i>coming soon!</i>	These tools can help ensure optimal PrEP delivery at facility level.
Community-led Support	Training package for community and other non-clinical cadres- <i>coming soon!</i>	
Community-led Support	Adaptable templates and tools- <i>coming soon!</i>	

Monitoring and Evaluation	<a href="#"><u>WHO Consolidated Guidelines on Person-centred HIV Strategic Information</u></a>	These guidelines present a standard minimum dataset, priority indicators, and recommendations to strengthen data use across HIV prevention, and can be used to develop LEN indicators.
Monitoring and Evaluation	<a href="#"><u>HIV Drug Resistance (HIVDR) Monitoring Toolkit</u></a>	This toolkit can assist ministries of health, project implementers and policy makers develop HIVDR monitoring strategies and support the collection and testing of blood samples for HIVDR testing amongst LEN for PrEP users.
