

**Getting LEN Rollout Right: Resources and Tools**  
**Latest Update: 5 June 2026**

[Lenacapavir for PrEP \(LEN\)](#), a six monthly injectable, was found highly effective at preventing HIV in [two large clinical trials](#) in 2024 and has since become the latest PrEP product to enter the market, following initial approval by the US Food and Drug Administration in June 2025 and [recommendation](#) by WHO. ([See here for a full list of current approvals and submissions.](#)) In September 2025, the [Gates Foundation](#) and [Unitaid](#) announced partnerships with generic manufacturers (Hetero Labs and Dr Reddy's Laboratories, respectively) to achieve a price of \$40 USD/person/year for generic injectable LEN, due to become available in 2027 in the countries under Gilead's license territory (including 120 lower and middle income countries).

In July 2025, the Global Fund [announced](#) support to nine countries for early LEN adoption. In September, PEPFAR [confirmed support](#) for seven of those countries and an additional three. In February 2026, Global Fund announced support for a further ten countries bringing the total number of early adopter countries supported to 24. Both funders initially committed to reaching up to two million users with LEN over three years, [increasing this to three million users in April 2026](#), starting in these countries. Unitaid, in coordination with CIFF, WHO, and implementing partners, is also actively supporting LEN introduction, including through implementation science programmes in Brazil, South Africa, and Zambia. A selection of early adopter countries began receiving LEN in December 2025, with others following in early 2026- a [much faster timeline](#) than has been seen with previous PrEP products.

**Lenacapavir for PrEP Rollout**

*PEPFAR and Global Fund are supporting 24 low- and middle-income countries (LMICs) with early access to programmatic supply of LEN. The first supply arrived in Eswatini and Zambia in November 2025 and the rest will be arriving throughout 2026 and early 2027. The Gates Foundation, Gilead, the NIH and Unitaid are also supporting 11 implementation science (IS) projects in 5 countries.*

The resources below, alongside insights drawn from the report [Getting PrEP Rollout Right This Time](#), can support countries in the early stages of LEN planning. These tools, and many others, are all publicly available on [PrEP Watch's Fundamentals of PrEP Planning pages](#) and are being disseminated as part of a coordinated effort between AVAC, CHAI, CIFF, the Global Fund, PEPFAR, PSI, Unitaid, Wits RHI, and WHO under the [Coalition to Accelerate Access to Long-Acting PrEP](#) to streamline efforts on tool development. Further tools will be posted as they become available. Newly-added tools are indicated with a **red star**. 

Category	Tool	How can this support LEN rollout?
Normative Guidance	<a href="#">WHO guidelines on LEN for PrEP</a>	WHO guidelines provide a basis for development of national guidelines.
Normative Guidance	<a href="#">Standard Operating Procedure (SOP) for LEN for PrEP</a>	This adaptable SOP supports the development and adoption of national SOPs that align with WHO LEN guidelines.
Normative Guidance	<a href="#">Template for technical working group (TWG) terms of reference</a>	This template can aid in setting up a TWG to develop national LEN guidelines.
Normative Guidance	<a href="#">Evidence from the PURPOSE trials shared at IAS 2025</a>	Evidence around use of LEN by adolescents and pregnant and lactating populations, as well as around certain drug interactions, can be incorporated into local clinical guidelines.
Normative Guidance	<a href="#">Policy Review Tool for WHO-Aligned HIV Prevention Service Delivery</a>	The goal of this tool is to assess whether national LEN guidelines are comprehensive, equitable and aligned with current WHO guidance and to identify opportunities for improvement.
Planning/ Monitoring and Evaluation	<a href="#">PrEP-it</a>	This web-based tool can help set PrEP (including LEN) targets, estimate costs and impact associated with targets, identify priority areas for PrEP for adolescent girls and young women, and forecast needed commodities.
Advocacy	<a href="#">An Advocates' Checklist for Lenacapavir for PrEP Introduction</a>	This checklist offers practical guidance to help civil society, advocates and implementers accelerate equitable access to LEN.
Provider Training	<a href="#">WHO and Jhpiego Provider Training Toolkit on Use of Oral and Long-Acting HIV PrEP</a>	This toolkit can be used to train clinicians to provide multiple PrEP methods, including LEN.
Provider Training	<a href="#">Lenacapavir Provider Tools and Job Aids</a>	These editable tools can be used to support providers to deliver LEN for PrEP, and include client fact sheets, counselling job aids, and charts to support initiation, injection, and switching.
Provider Training	<a href="#">Lenacapavir Training Videos</a>	These videos can be used to train providers offering LEN for PrEP.
Site Assessment	<a href="#">PrEP Site Implementation and New Product Readiness Assessment Tool</a>	This assessment tool can be used to evaluate and improve existing PrEP services at a facility and to prepare for

		the optimal delivery of new PrEP products, such as LEN for PrEP.
Site Assessment	<a href="#">Site readiness assessment template</a>	This adaptable template can be used to determine which sites are ready to begin delivering LEN for PrEP.
Site Assessment	<a href="#">Lenacapavir implementation planning tool</a>	This tool can be used to develop individual action plans for facilities introducing LEN.
Site Assessment	Facility-level checklist and SOP template- <i>coming soon!</i>	These tools can help ensure optimal PrEP delivery at facility level.
Community-led Support	Training package for community and other non-clinical cadres- <i>coming soon!</i>	
Community-led Support	Adaptable templates and tools- <i>coming soon!</i>	
Demand Generation	<a href="#">HIV Prevention Ambassador Training Package and Toolkit</a>	This toolkit can prepare potential and current PrEP users to be leaders – or “Ambassadors” – in the rollout of PrEP for HIV prevention in their communities, and has been updated to include LEN.
Monitoring and Evaluation	<a href="#">PrEP Clinical Reporting Tools</a>	This suite of clinical reporting forms can be used for PrEP reporting, including LEN for PrEP.
Monitoring and Evaluation	<a href="#">WHO Consolidated Guidelines on Person-centred HIV Strategic Information</a>	These guidelines present a standard minimum dataset, priority indicators, and recommendations to strengthen data use across HIV prevention, and can be used to develop LEN indicators.
Monitoring and Evaluation	<a href="#">HIV Drug Resistance (HIVDR) Monitoring Toolkit</a>	This toolkit can assist ministries of health, project implementers and policy makers develop HIVDR monitoring strategies and support the collection and testing of blood samples for HIVDR testing amongst LEN for PrEP users.
