WHAT DOES... PrEP DO?

I heard PrEP doesn't work.
My friend took it and still got pregnant and got an STI.

Your friend's experience is real - but PrEP was not what failed her.

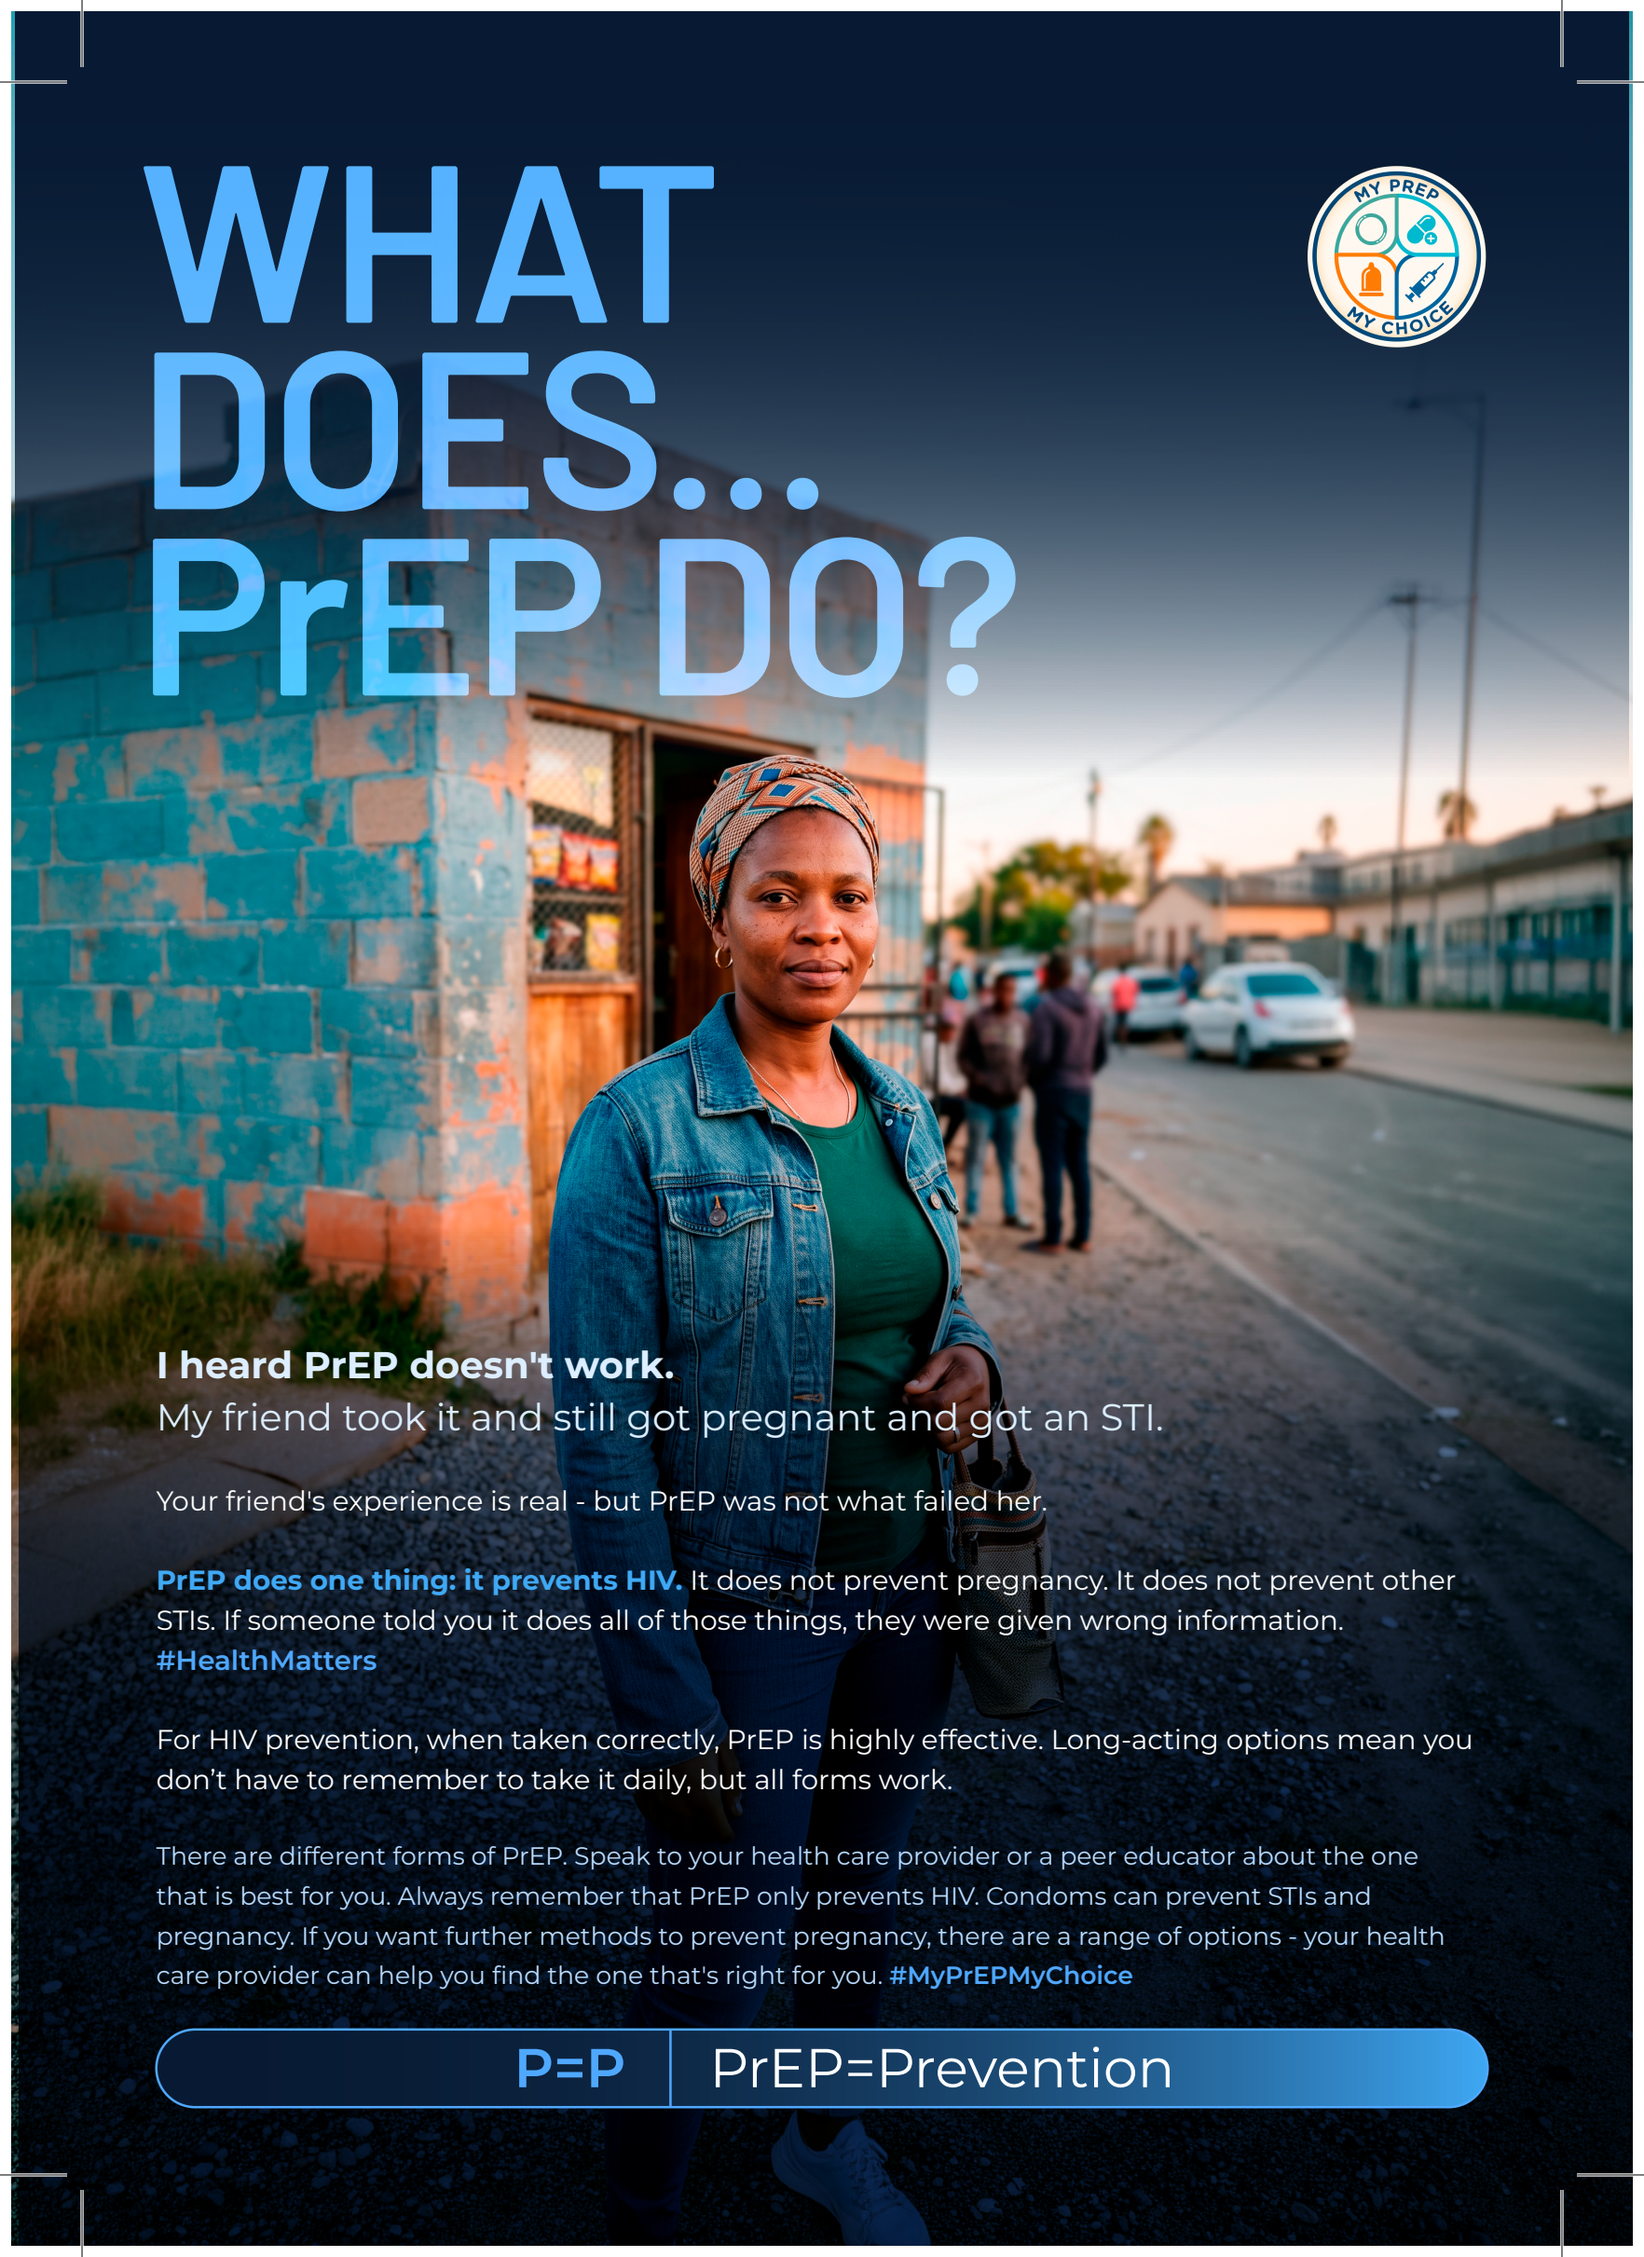

PrEP does one thing: it prevents HIV. It does not prevent pregnancy. It does not prevent other STIs. If someone told you it does all of those things, they were given wrong information. **#HealthMatters**

For HIV prevention, when taken correctly, PrEP is highly effective. Long-acting options mean you don't have to remember to take it daily, but all forms work.

There are different forms of PrEP. Speak to your health care provider or a peer educator about the one that is best for you. Always remember that PrEP only prevents HIV. Condoms can prevent STIs and pregnancy. If you want further methods to prevent pregnancy, there are a range of options - your health care provider can help you find the one that's right for you. **#MyPrEPMyChoice**
